BOF: Immersive Visualization for Science and Research

Siggraph 2015, Los Angeles, CA

# VMD – “Visual Molecular Dynamics”

- Visualization and analysis of:
  - molecular dynamics simulations
  - particle systems and whole cells
  - cryoEM densities, volumetric data
  - quantum chemistry calculations
  - sequence information
- User extensible w/ scripting and plugins
- <http://www.ks.uiuc.edu/Research/vmd/>

Whole Cell Simulation

Sequence Data

Quantum Chemistry

CryoEM, Cellular Tomography

# Goal: A Computational Microscope

Study the molecular machines in living cells

Ribosome: target for antibiotics

Poliovirus

# VMD GPU-Accelerated Ray Tracing Engine

- Complementary to VMD OpenGL GLSL renderer
- Key ray tracing benefits:
  - Ambient occlusion lighting and shadows
  - High quality transparent surfaces
  - Depth of field focal blur and similar optical effects
  - Mirror reflection
  - Single-pass stereoscopic rendering
  - Special panoramic and 360° cameras:
    - Planetarium dome master format
    - Equirectangular spheremap projections
    - Cubemap projections

# Lighting Comparison

**Two lights, no shadows**

**Two lights, hard shadows, 1 shadow ray per light**

**Ambient occlusion + two lights, 144 AO rays/hit**

OpenGLDisplayDevice

FileRenderer

Windowed OpenGL GPU

OpenGL Pbuffer GPU

Tachyon CPU RT

TachyonL-OptiX GPU RT  
Batch + Interactive

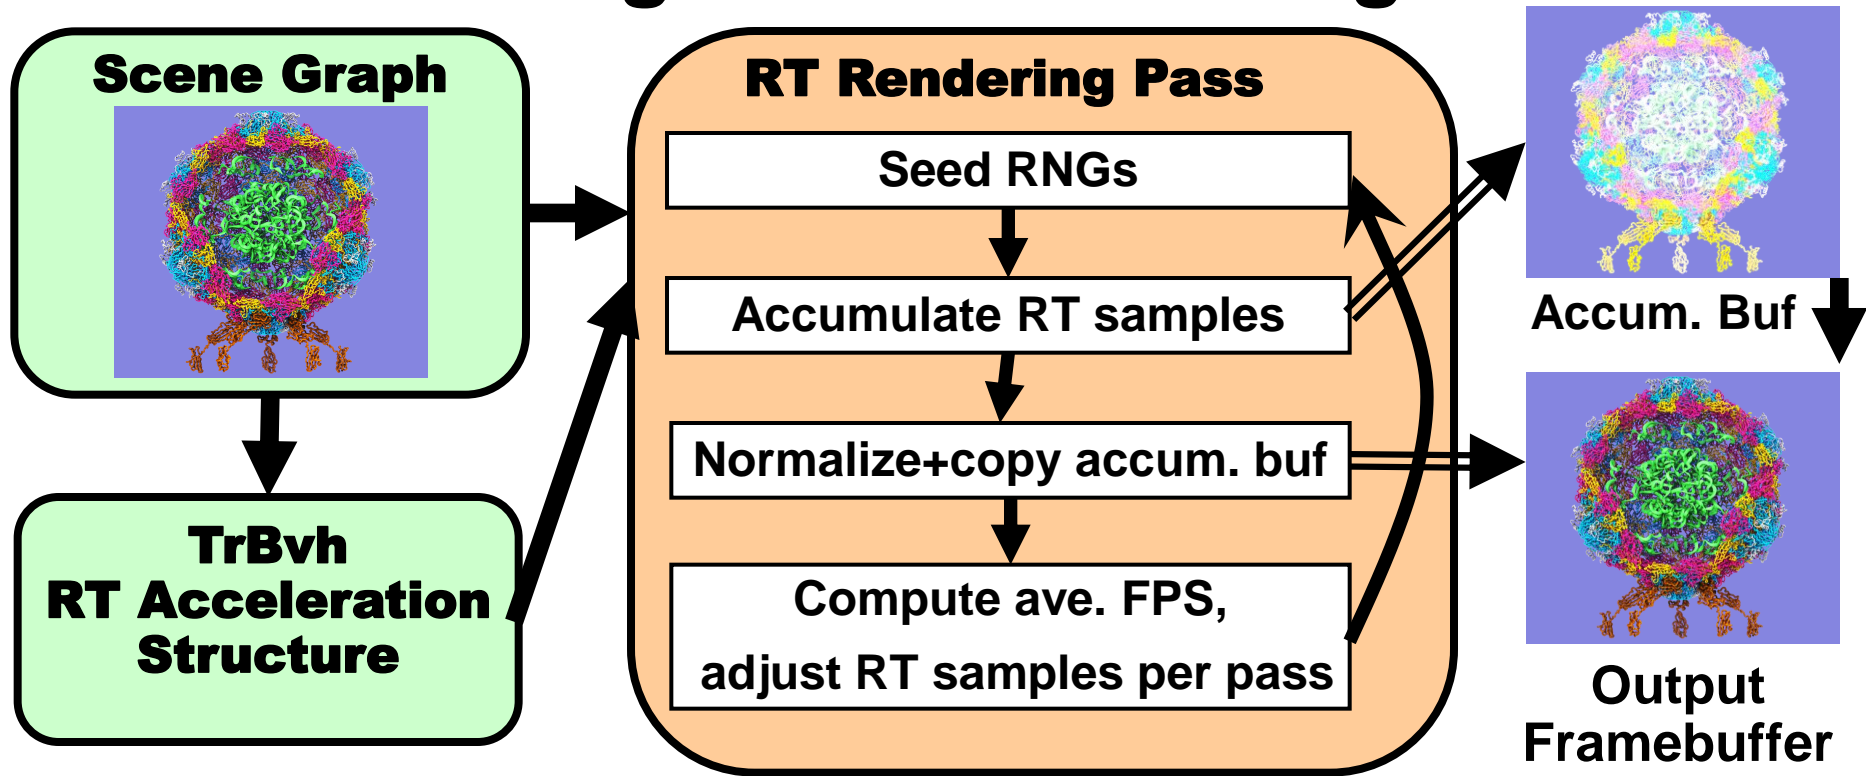

# VMD Interactive GPU Ray Tracing

- High quality lighting, shadows, transparency, depth-of-field focal blur, etc.
- VMD now provides – ***interactive***– ray tracing on laptops, desktops, and ***remote*** visual supercomputers
- **Movie was recorded live while using remote visualization**

# VMD TachyonL-OptiX Interactive RT w/ Progressive Rendering

# VMD TachyonL-OptiX: Multi-GPU on NVIDIA VCA Cluster

# VMD Planetarium Dome Master Camera

- Fully interactive RT with ambient occlusion, shadows, depth of field, reflections, and so on
- Both mono and stereoscopic
- No further post-processing required

# Stereoscopic Panorama Ray Tracing w/ OptiX

- Render 360° images and movies for VR headsets such as Oculus Rift, Google Cardboard
- Ray trace panoramic stereo spheremaps, cubemaps that are displayed on to VR headset via OpenGL texturing
- Stereo requires spherical camera projection not well suited to rasterization
- Benefits from OptiX multi-GPU rendering, and load balancing

# Future Work

- Further integration of interactive ray tracing into VMD
  - Seamless interactive RT in main VMD display
  - Support trajectory playback in interactive RT
  - Multi-node interactive RT on HPC systems
- Improved performance / quality trade-offs in interactive RT stochastic sampling strategies
- Optimize GPU scene DMA and BVH regen speed for time-varying geometry, e.g. MD trajectories
- Optimization of GPU-specific RT intersection routines, memory layout
- GPU-accelerated movie encoder back-end
- Interactive RT combined with remote viz on HPC systems, much larger data sizes
