

# Visualizing Biomolecular Complexes on x86 and KNL Platforms: Integrating VMD and OSPRay

John E. Stone

Theoretical and Computational Biophysics Group

Beckman Institute for Advanced Science and Technology

University of Illinois at Urbana-Champaign

**<http://www.ks.uiuc.edu/Research/vmd/>**

Intel HPC Developer Conference,

4:15pm to 5:05pm, Omni Downtown Austin

Saturday Nov 14<sup>th</sup>, 2015, Austin, TX

# VMD – “Visual Molecular Dynamics”

- Visualization and analysis of:
  - molecular dynamics simulations
  - quantum chemistry calculations
  - particle systems and whole cells
  - sequence data
- User extensible w/ scripting and plugins
- <http://www.ks.uiuc.edu/Research/vmd/>

Ribosome Sequences

Electrons in  
Vibrating Buckyball

Cellular Tomography  
Cryo-electron Microscopy

Whole Cell Simulations

# Goal: A Computational Microscope

Study the molecular machines in living cells

Ribosome: target for antibiotics

Poliovirus

# Ray Tracing in VMD

- Support for ray tracing of VMD molecular scenes began in 1995
- Tachyon parallel RT engine interfaced with VMD (1999)
- Tachyon embedded as an internal VMD rendering engine (2002)
- Built-in support for large scale parallel rendering (2012)
- Refactoring of VMD to allow fully interactive ray tracing as an alternative to OpenGL (2014)

Robert R. Johnson  
<http://astro.temple.edu/~rjohnson>

# Tachyon Ray Tracing Engine

- Originally developed on Intel iPSC/860 hypercube (1994)
- First support for MPI (1995)
- Multithreading for Intel Paragon XP/S, large SGI and Sun shared memory machines (1995)
- In-situ CFD visualization (1996)
- Support for OpenMP w/ Kuck and Associates KCC (1998)
- Co-developed w/ VMD, 1998-present

**Rendering of Numerical Flow Simulations Using MPI.** John Stone and Mark Underwood. Second MPI Developers Conference, pages 138-141, 1996.

**An Efficient Library for Parallel Ray Tracing and Animation.** John E. Stone. Master's Thesis, University of Missouri-Rolla, Department of Computer Science, April 1998.

**Early Experiences Scaling VMD Molecular Visualization and Analysis Jobs on Blue Waters.** John E. Stone, Barry Isralewitz, and Klaus Schulten.. Extreme Scaling Workshop (XSW), pp. 43-50, 2013.

# Biomolecular Visualization Challenges

- Geometrically complex scenes
- Spatial relationships important to see clearly: fog, shadows, AO helpful
- Often show a mix of structural and spatial properties
- Time varying!

# Geometrically Complex Scenes

Ray tracing techniques well matched to molecular viz. needs:

- Curved geometry, e.g. spheres, cylinders, toroidal patches, easily supported
- Greatly reduced memory footprint vs. polygonalization
- Runtime scales only moderately with increasing geometric complexity
- Occlusion culling is “free”, RT acceleration algorithms do this and much more

# Ray Tracing for Stereoscopic Planetarium Dome Masters, Panoramic Displays

- **RT aptly suited to 360° panoramic rendering**
- **Single-pass rendering** of stereo pairs, spheremaps, cubemaps, planetarium dome masters
- Stereo panoramas require spherical camera projection scheme that is (very) poorly suited to rasterization
- Easy to correct for VR headset lens distortions, e.g. Oculus Rift, Google Cardboard

# Ray Tracing Naturally Supports Advanced Lighting and Shading Techniques

**Two lights,  
no shadows:  
typical of OpenGL**

**Two lights,  
hard shadows,  
1 shadow ray per light**

**Two lights, shadows,  
ambient occlusion  
w/ 144 AO rays/hit**

# Benefits of Advanced Lighting and Shading Techniques

- Exploit visual intuition
- Spend computer time in exchange for scientists' time, make images that are more easily interpreted

# Ray Tracing Large Biomolecular Complexes: Large Physical Memory Required (128GB)

# Ray Tracing Performance

- Well suited to massively parallel hardware
- Peak performance requires full exploitation of SIMD/vectorization, multithreading, efficient use of memory bandwidth
- Traditional languages and compilers not currently up to the task:
  - Efficacy of compiler autovectorization for Tachyon and other classical RT codes is very low...
  - Core ray tracing kernels have to be explicitly designed for the target hardware, SIMD, etc.

# Fast Ray Tracing Frameworks

- Applications focus on higher level RT ops
- SPMD-oriented languages and compilers address the shortcomings of traditional tools
- Intel RT frameworks provide performance-critical algorithms on IA hardware:
  - Embree: triangles only
  - OSPRay: general RT framework, includes not only basic kernels but also complete renderer implementations

# Initial OSPRay support in VMD

- Support researchers with allocations at supercomputer centers with machines based on Knights Landing or Intel® Xeon® processors
- OSPRay functionality general enough for rendering requirements of the majority of VMD scenes
  - Initial VMD-OSPRay development uses general purpose OSPRay renderers not specific to VMD
  - Built-in OSPRay renderers could be used by any visualization tool
  - VMD compensates for currently-unimplemented geometry types and mesh formats through automatic internal conversion

VR Input "Tools"

## Display Subsystem

VMDDisplayList

DisplayDevice

OpenGLDisplayDevice

FileRenderer

Windowed OpenGL

OpenGL Pbuffer

Tachyon

OSPRay

# VMD Scene Graph in OSPRay

- VMD currently flattens internal scene graph, transforms geom. to eye space, maps to native OSPRay geom. and materials
- Many opportunities for reduction of memory footprint, avoidance of reformatting
- Ongoing work: streamlining implementation, achieving close or identical shading where possible

# VMD-OSPRay Offline/Batch Mode

## Ray Tracing Loop

**Scene Graph  
and RT accel.  
data structures**

### Batch RT Rendering

```
ospFramebufferClear(OSP_FB_ACCUM)
```

```
ospRenderFrame(... OSP_FB_ACCUM)
```

Loop until required antialiasing and  
ambient occlusion lighting  
samples have been accumulated

```
ospMapFramebuffer()  
Write Image to Disk...  
ospUnmapFramebuffer()
```

**Write Output  
Framebuffer**

# VMD-OSPRay Interactive Ray Tracing with Progressive Refinement

**Scene Graph and RT accel. data structures**

## RT Progressive Refinement Loop

`ospFramebufferClear(OSP_FB_ACCUM)`

`ospRenderFrame(... OSP_FB_ACCUM)`

Check for User Interface Inputs,  
Update OSPRay Renderer State

`ospMapFramebuffer()`

Draw...

`ospUnmapFramebuffer()`

**Draw Output  
Framebuffer**

# Early VMD+OSPRay Renderings

# **DNA and Silicon Nanopore**

**Polio Virus**

**Ribosome**

# Planar Photosynthetic Membrane Patch

# Future Work

- Continue optimization of OSPRay renderer class
- Stereosopic, panoramic rendering in OSPRay
- Support upcoming ANL Aurora machine
- Interactive ray tracing of time-varying molecular geometry
